

🌐 Light Speed Metro Area Ethernet

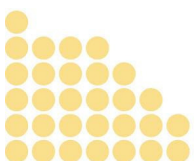

Forget everything you know about building business data networks. Forget inflated telecom pricing, **forget settling for less speed**. Introducing **Light Speed Metro Area Ethernet Service** - ultra high speed direct-to-business Fiber Optic connectivity solutions, priced within reach of traditional wide area networking.

Light Speed Ethernet products offer your business communication services from **10 Megs to 10 Gigabits** between your multiple office locations. Whether it's across town or across the state, Improve interconnectivity between your office locations, your business partners and major knowledge centers - **a staggering improvement in service** at about the price you're paying for traditional wide area networks. Call Arialink today and challenge us to prove it - **we're serious about evolving the business network**.

WAN Products

- 🌐 **E-Line Service** – Replace your slow private line T1 lines with dedicated fiber optic Ethernet bandwidth in a point to point configuration. Bandwidth available up to 10 Gigabits. No expensive or complicated equipment required.
- 🌐 **E-LAN Service** – Replace your Frame Relay or T1 lines with dedicated fiber optic Ethernet bandwidth in a multi-point configuration between multiple network sites. Bandwidth up to 10 Gigabits available for transparent LAN bridging or MPLS routing.
- 🌐 **Ethernet over Copper** – Where fiber connectivity isn't available, Arialink delivers service using the latest Ethernet over copper technology. Transform your existing legacy copper network into native Ethernet at up to 50 Megabits between sites.
- 🌐 **Integrated Service** – Increase the value of traditional T1 private lines, reach new locations, increase speed, reduce complexity and save money with a Light Speed fiber optic connection at your head end site. Our Light Speed Ethernet technology can breathe new life back into T1 connected locations.
- 🌐 **Internet Service** – There is no speed limit at fiber optic speeds. Forget about expensive T1's or unreliable DSL and Cable lines. Light Speed future-proofs your Internet capacity at 100+ Meg speeds, with the reliability of a direct-to-business optical fiber connection.

Call today and qualify your business for Light Speed service **888-960-LINK**

Benefits for Health Care

The bandwidth demands of modern Information Technology systems in the Health Care market have exceeded the capacity of traditional “telco” based data circuits, such as T1 or DS3. Simply put, it is rapidly becoming unfeasible to implement medical imaging, patient management and colleague collaboration systems in a traditional wide area network environment. This leaves regional care facilities either lacking critical technology resources or forced to duplicate expensive systems. By connecting each of your medical facilities with Arialink’s Optical Ethernet network, regional facilities will interconnect at Gigabit Ethernet speeds, facilitating shared systems, dramatically lowering cost and increasing overall operating efficiencies.

Benefits for Education

Arialink has a strong expertise with inter networking educational users and the region’s major knowledge centers. By connecting with the Arialink network, whether it’s native Optical Ethernet or Ethernet over Copper products, your interconnectivity between peers in major knowledge centers increases dramatically in speed and quality. Educational customers, such as School Districts or Higher Ed have a direct path to the educational content offered by our 100’s of our other educational customers. By avoiding the Internet and interconnecting between sites using native Ethernet, you reduce bandwidth cost, dramatically improve speed and quality.

Guarantee Service Levels (SLA)

Arialink’s Guarantee of Service is distinguished from the competition. While speed and cost of service are important factors in your decision process, we know that quality and availability of service is your concern. Look no further. Arialink does not compromise any of these important factors to gain a competitive edge. Our industry leading **Service Level Agreement** provides a guarantee, in writing, of our commitment to delivering the highest quality service possible.
